DETAILED ACTION

Allowable Subject Matter

Claims 1-12, and 16-19 are allowed.

The following is an examiner's statement of reasons for allowance: While the prior art of record including Huff'254, Bardill '022, Sherard '065, and van Eek et al '266 all teach the principles of cryogenic drilling for freezing up unconsolidated borehole conditions so that a borehole can be completed in an unconsolidated formation or soil. The prior art of record however at least fails to teach a drilling method including the steps of first drilling a horizontal pilot hole of a first selected diameter, following by inserting a grindable casing into the pilot hole and injecting a cryogenic fluid through the grindable casing to create a freeze zone of frozen moisture adjacent the casing, and finally forming a larger borehole having a diameter greater than the diameter of the original pilot but less than the diameter of the frozen zone.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Huff'254, Bardill '022, Sherard '065, and van Eek et al'266 all teach the principles of cryogenic drilling for freezing up unconsolidated borehole conditions.
